Spring-Summer

CROPS & GARDEN

Weed control

Mulching is an agricultural practice, also used today on gardens and crops, to mechanically prevent weed growth, without using chemical herbicides. TENAX offers a range of films, covers and non-woven fabrics which, laid around the crops, maintain the humidity of the ground but stop light filtering, thereby depriving the weed seeds of the chance to develop.

COVER PRO (EX GREEN COVER)

TOP QUALITY UV TREATED

Professional cover

Very fine but not waterproof, it protects and warms the roots, and prevents the development of weeds, ensuring the crops' quality and cleanliness, and reducing maintenance. Weighting 105 g/m^2, it is very durable and can be walked on. The particularly robust structure makes it ideal on slight slopes or embankments, where it helps to prevent leaching of the earth. It is also perfect for use in flowerbeds, hedges and paths, thanks to its green colour which fits in perfectly with the environment. It is squared (vertical green lines and horizontal black lines) to aid in positioning the plants.

BULK ROLLS

0,52x100 m	
1,05x100 m	
1,65x100 m	
2,10x100 m	
3,30x100 m	
4,20x100 m	
5,25x100 m	

Rolls over 3,30 m are folded for an easy handling.

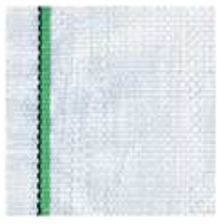
The product deteriorates if in contact with pesticides or weed killers with a high sulphur concentration (80%).

- Quality Made in Italy.
- Free of chemicals.
- 100% virgin raw material for the best performance.
- It does not deform, does not tear, is very durable and can be walked on.
- High UV resistance for maximum strength and colour durability.
- The bright green colour is extremely homogeneous and uniform, guaranteed over time.
- Micro-perforation ensures excellent permeability, preventing the growth of weeds.

GREEN
105 g/m^2
With 13x18 cm squares (vertical green and horizontal black).
For planting on paths, flowerbeds, slight slopes and embankments. Perfect for ground cover plants, where green blends in perfectly with the natural colours.

BLACK
105 g/m^2
With 15 cm green squares.
It is primarily used in nurseries. The squares aid dimensional recognition and allow plant pots to be placed in an orderly and uniform manner.

BROWN
105 g/m^2
With horizontal green lines every 15 cm.
Suitable for planting on paths, flowerbeds, slight slopes and embankments. The shade recalls the colour of most land and gives the feeling of a natural material.



WHITE
105 g/m^2
With vertical green lines every 15 cm.
With a reflective function. It partly prevents weeds from growing but it reflects the sunlight and enhances the colouration of fruits.

COVER HG (EX OUTDOOR COVER)

UV TREATED

Multipurpose and light mulching cover

Multipurpose hobby cover mainly used for weed control in the vegetable and flower garden. Made from tightly woven polypropylene, it provides good resistance to UV and tearing. When camping, it can be used as a mat for tents and caravans. Also used as an inexpensive screen.

FULL COVER

Practical and inexpensive

Non-woven fabric permeable to water, air and fertilisers. This product will prevent weeds from growing and eliminate the need to use herbicides. Ideal in the garden for flowerbeds, it can also be used as a soil stabilizer for creating new pathways. Always remember to cover the product with gravel or bark, to avoid sun damage.

BLACK&WHITE COVER

Designed by Tenax

5 advantages, a single product

40 micron double-face polyethylene film: **white** on top and **black** underneath.

- The **black part** is in contact with the ground and prevents weed growth.
- The **white part** attracts sunlight and maintains the correct temperature, increasing plant growth and fruit maturation and, at the same time, avoiding contact with the ground.

The white side of this mulching film repels some insects, especially aphids and reduces mould.

Crops which commonly benefit from this type of film are summer salads, cauliflower and broccoli, as well as small fruits like strawberries.

BULK ROLLS

1,4x100 m

40 µ

5 advantages

1. Prevents weed growth.
2. Enhances plant maturation.
3. Keeps the soil fresh, saving water.
4. Does not burn young plants.
5. Keeps aphids and small insects away from crop.

BLACK COVER

UV TREATED

Waterproof film for strawberries

This PE black film will keep the soil warm and humid and will deprive weeds of air, light and water. Practical and convenient, it provides the best conditions for growth of strawberries and vegetables, avoiding contact with the soil, thus keeping them clean.
